

Inveneo

Our mission is to get the tools of Information and Communications Technology (ICTs) to the people and organizations who need them most, in rural and under-served areas in the developing world

Over 2 billion people have little or no access to the most basic computing or communication technologies

But to these communities, the tools of technology  
can be powerful instruments of hope and change

**Delivering sustainable ICTs to organizations that provide vital services in these communities provides a path to....**

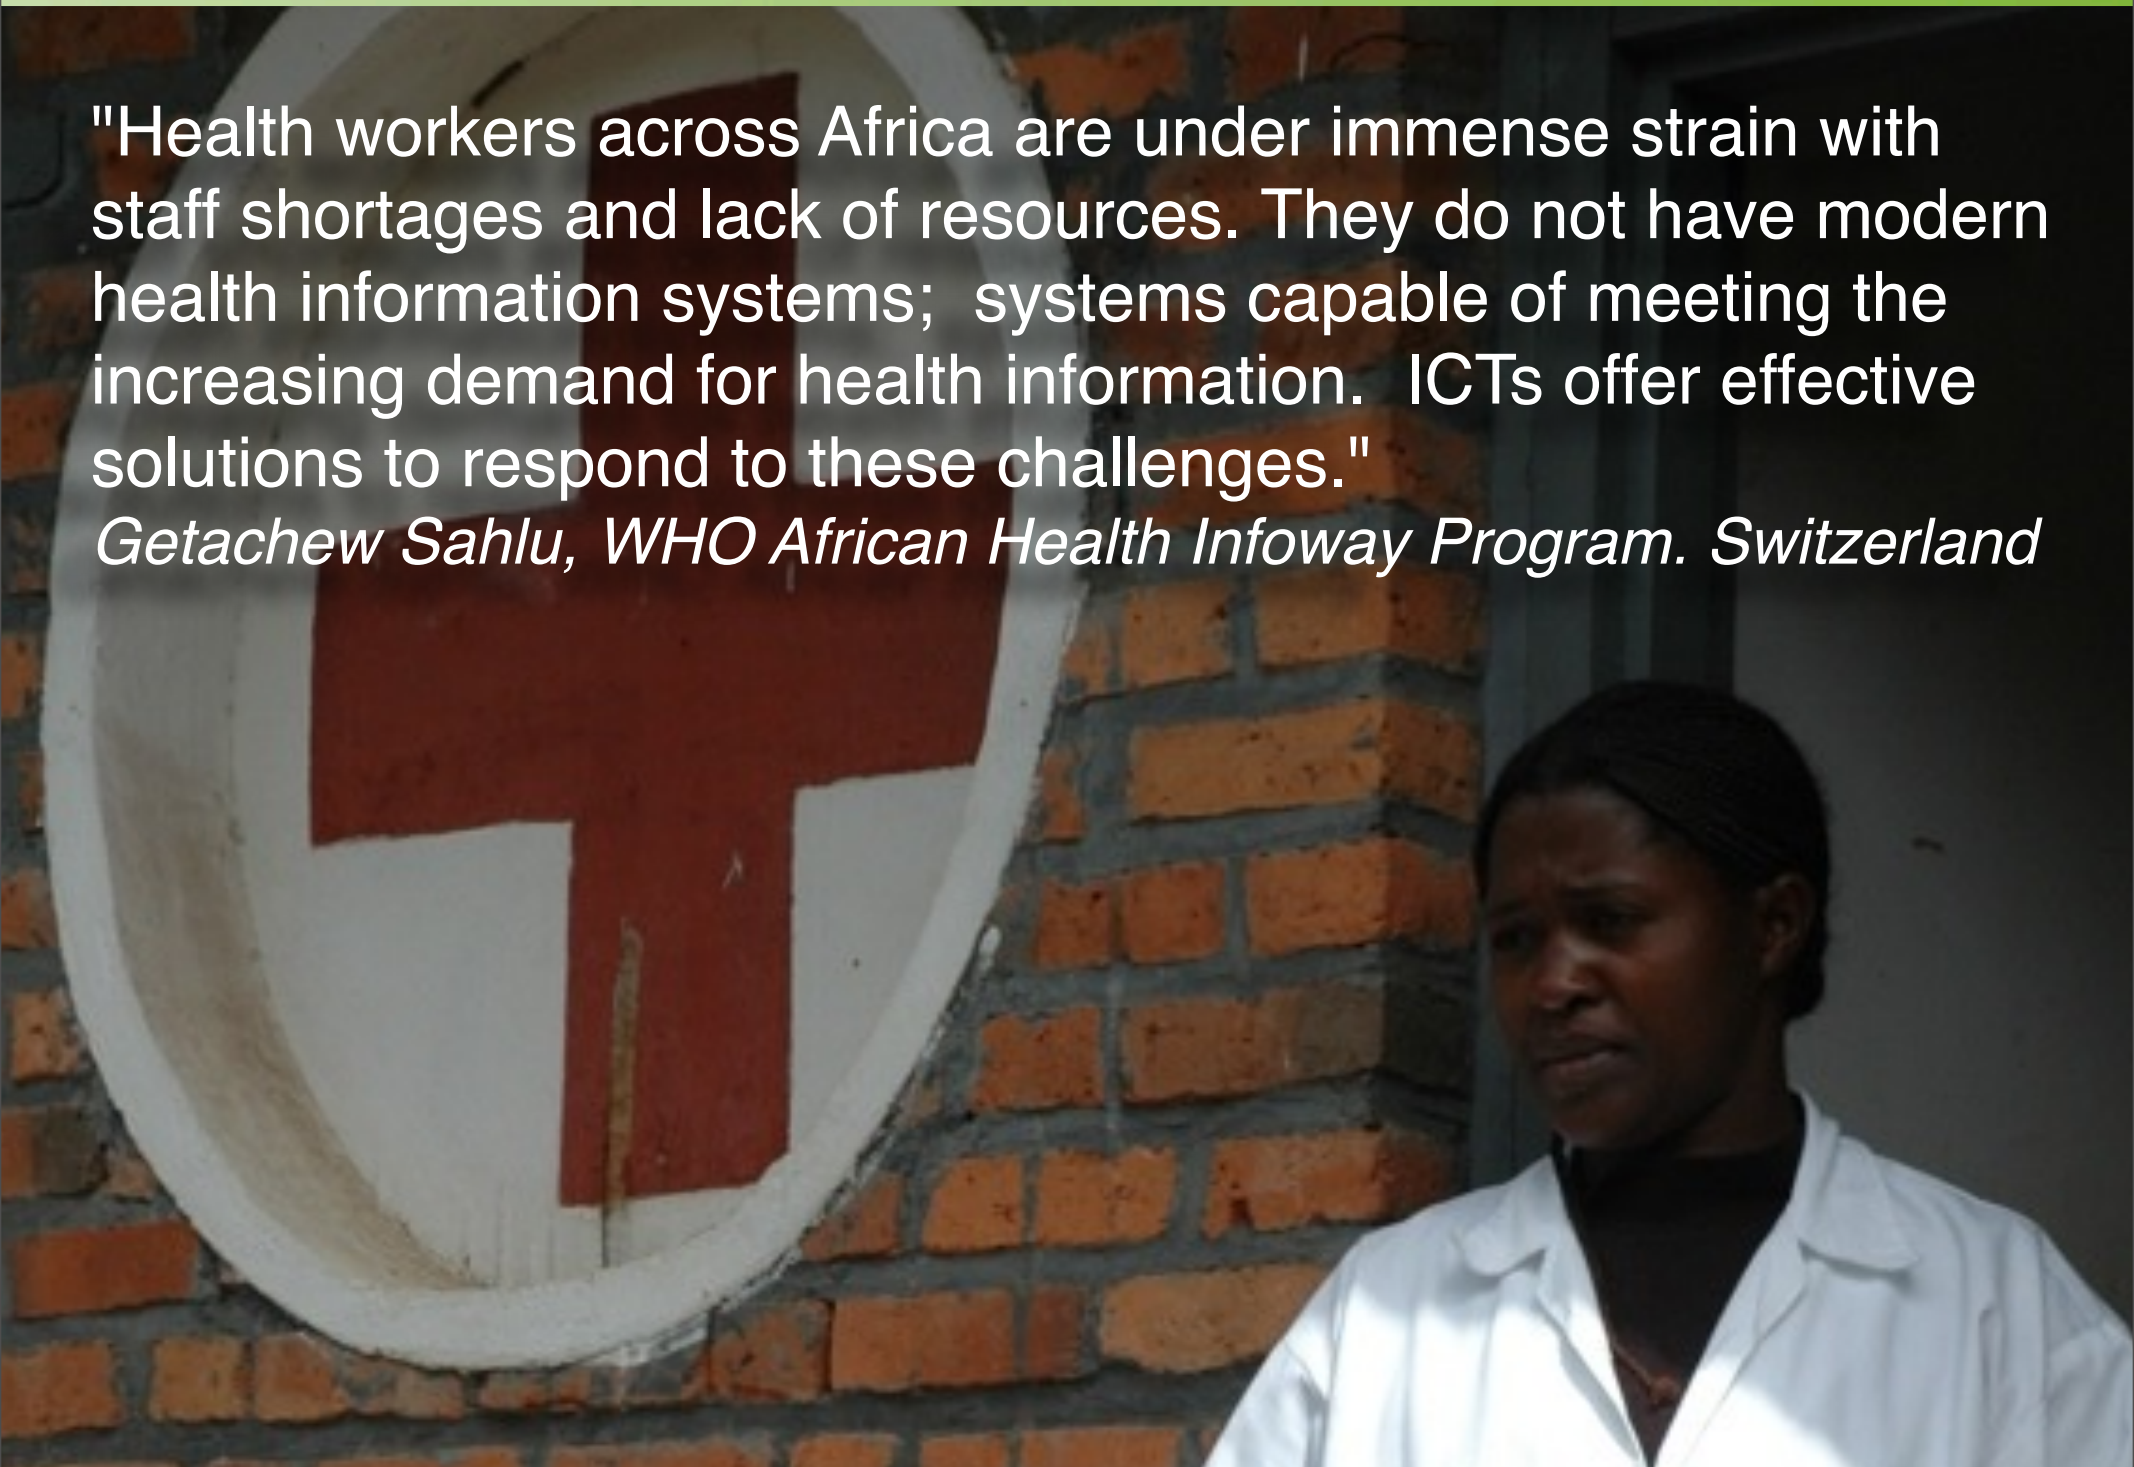

“In the classrooms we teach theories, but students need to see how things are in reality. The computers allow us to show the theory in laboratory and in practice”  
*Jean Claude Nsengijumva, biology teacher*

"Health workers across Africa are under immense strain with staff shortages and lack of resources. They do not have modern health information systems; systems capable of meeting the increasing demand for health information. ICTs offer effective solutions to respond to these challenges."

*Getachew Sahlu, WHO African Health Infoway Program. Switzerland*

“ICTs can help farmers get market prices, enable better micro-banking to a community and allow individuals/communities to participate more in the local and regional economies”

*Matt Berg, ICT Director for Millennium Villages*

“Now that we have access to modern communications, we can attract more development organizations to help this region recover from from the effects of war.”

*Father Joseph Okumu, Caritas.  
Northern Uganda*

Since 2006, Inveneo has:

- built a local partner network in 14 countries
- served over 150 health, economic development and relief projects in 22 countries
- reached 268 communities and almost 700,000 people with life-impacting ICTs

Building

# Rural ICT Challenges

- No power, low power, or expensive power
- Punishing environments for ICTs - heat dust humidity
- Lack of affordable Internet connectivity
- Inexperienced users and administrators
- Lack of professional IT support
- Expensive, inappropriate or inaccessible solutions

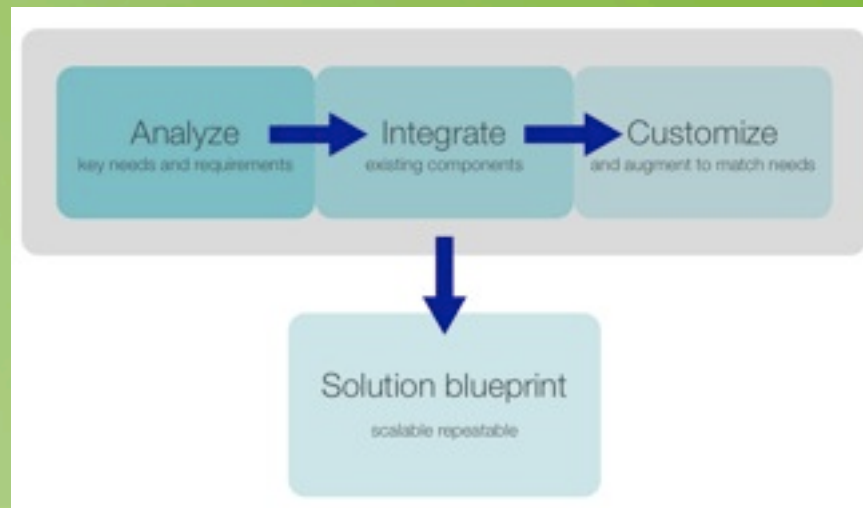

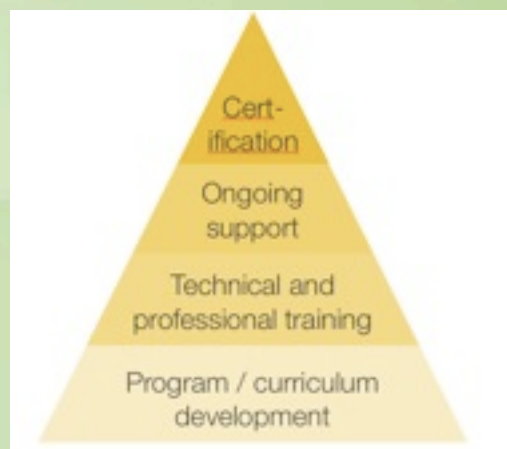

# We deliver highly sustainable solutions for our clients by:

Providing expertise

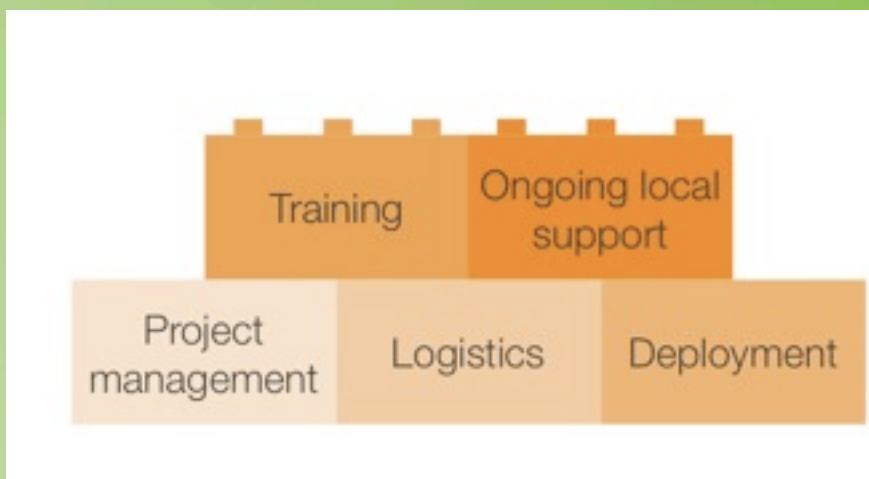

Designing/integrating SW and HW

Creating capacity building programs

Implementing projects

# The ICIP Program

Building the human infrastructure to deliver ICTs

# ICIP Overview

## Program

- Recruit skilled in-country ICT entrepreneurs (typically 2 - 20 employees)
- Certify using applied classroom and hands-on training
- Deliver direct access to relevant rural ICT technologies
- Provide ongoing support

## Objectives

- Create a global pool of ICT talent focused on rural solutions
- Improve overall affordability and sustainability of projects
- Create new revenue opportunities for entrepreneurs
- Grow the local ICT economy

# Welcome to the Inveneo Family!
