Inveneo Desktop Linux

Pre-installed Applications

- Firefox - web browser

- Claws - email client

- Pidgin - instant messaging (AIM, MSN, Yahoo Messenger, Google Talk, etc.)

- OpenOffice - Write, Calc, Impress, Draw

- Evince - PDF Viewer

- GCompris - educational software

- Media Player - Plays mp3, wav, avi, divx, etc.

- gThumb - image viewer and editor

- Totem - movie player

- Skype - Internet Calling

- Brasero - CD/DVD Burner

- tsclient - remote desktop client for RDP and VNC

- Gnome games

- Xsane - image scanner

Read-Only Filesystem

- OS and applications are stored in a read-only filesystem. Writes are redirected to RAM disk or remote storage.

- Restart erases RAM and returns system to original state.

- Only Administrators can "un-lock" system.

- Why read-only?
  - Virus, trojans, and spyware protection - users cannot install or remove software
  - Immune to corruption from power disconnect
  - If misconfigured, restart brings back to clean state
- **Summary:** Keeps systems operating well with zero software maintenance

Settings vs Software Installation

- Settings - Bookmarks, Desktop Background images, Printer configurations, Local file storage, private shares on server, language settings

- Software Installation - New software
  - For example, using synaptic package manager to install an application
  - System must first be set to **Install Mode**!

Configuration System

Preferences and Settings

- – will be remembered on reboot if you "*Save Configuration*"

- – will NOT be remembered on reboot if you DON'T "*Save Configuration*"

# Install Mode

What if I need to install new software?

– Administrators can boot into **Install Mode** to install software.

– Changes are permanent! (Be cautious!)

– After reboot, system goes back into normal state with new software applied.

Factory Reset

Returns system back to original default state

- Preferences/settings configuration are deleted (even after Save Configuration)

- Newly installed software in **Install Mode** are NOT deleted.

Install Mode vs Factory Reset

	Save Configuration/ Factory Reset	Install Mode
Bookmarks	✔	
Desktop images	✔	
Printer Configurations	✔	
private shares on server	✔	
local file storage	✔	
language settings	✔	
new software		✔

Remember! A **Factory Reset** will NOT delete software installed in **Install Mode**
